- Bootstrap
- Node.js
- MongoDB
- Scrum
- MVC pattern
- Git
- Github
- android studio
- auth0
- Heroku
- Unity
- Visual studio code

Education

CodeWorks April-July 2020

- Certificates of completion
- Full Stack web July 2020

SoloLearn 2018 - 2020

- Certificate of completion
- HTML Sep 2018
 - JavaScript Sep 2018
 - CSS Oct 2018
 - C# Jan 2020
 - Java April 2019
 - SQL Oct- 2018
 - Python Sep 2018
 - PHP Oct 2018

Profile

Experienced in building full stack web applications using various Languages and frameworks using the solid principals of object oriented programming and the MVC design pattern . Passionate about problem solving and learning new things. 10 Years of experience leading others in a fast paced environment.

Experience

Papa Murphy's Store Manager- May 2009 - April 2020

- Primed 6 managers for several locations on leadership ,scheduling , forecasting sales,inventory control and labor control.
- Hired ,trained and coached 100+ staff members on customer service, food safety and operational standards.
- Exceeded expectations controlling labor and food by forecasting sales accurately and holding team members accountable.
- Often ranked number one in customer service, due to the customer focused culture created and maintained .
- Helped revise and improve, dough production procedures and labor forecasting. this resulted in better labor control and less food waste.

CodeWorks Student- April 2020 - July 2020

HomeScholar - <https://homescholar.herokuapp.com>

Description:

As a home school teacher create lesson plans and grade student assignments with ease all while auto generating printable transcripts . Share events or tips and tricks with other users.

contributions:

Developed the front and back end for the social aspect of this application. Helped with design and plan using Figma for design,Trello for scrum and LucidChart for data relationships.

Keeper- not currently deployed

Description:

Inspired by Pinterest's boards and pins. Create keeps and store them in vaults. Users can create a keep with a name description and image and save it for themselves of share it with the world.

contributions:

Wrote the client side of this application using Vue.js and Bootstrap . The server of this application was done utilizing .Net WebApi and dapper. Auth0 was used for authorization management.

Bug Tracker- <https://track-a-bug.herokuapp.com/>

Description:

Report and track bugs in your application. Update the status and make notes as the bugs are fixed or updated.

contributions:

For the client used Vue.js and Bootstrap to style and structure the pages. For the server utilized Node.js and MongoDB to handle server requests and handle data storage needs.
